

Moxa NPort Customer Configuration
SUPPORT DOCUMENT

Description

The Thor Guard system will have a Moxa routing device attached to it via a DB9 serial cable (provided). The Moxa will then plug into an Ethernet port or network device and route data over your Local Area Network to a PC/Server that is running the ThorPCX software. The Thor Guard system will need a Unique ID and the Moxa device will need to be programmed with appropriate network settings to allow for routing data over your Local Area Network.
